PROFESSIONAL SUMMARY

Backend Software Developer and Computer Science graduate with hands-on experience designing, building, and deploying production REST APIs using Java and Spring Boot. Skilled in layered system architecture, PostgreSQL database integration, cloud deployment, input validation, and CI/CD pipelines. Brings additional strength in technical support, documentation, and Agile team environments. Driven to contribute immediately, grow fast, and solve real problems.

TECHNICAL SKILLS

Languages: Java | Python | JavaScript | SQL | HTML/CSS | Go | R

Frameworks: Spring Boot | Spring Data JPA | Hibernate | Django REST Framework | Next.js | Prisma ORM

Databases: PostgreSQL | SQLite | SQL

Tools: Git | GitHub | Postman | IntelliJ IDEA | VS Code | Railway | Docker | Linux/Unix | Azure

Concepts: OOP | REST Architecture | Agile/Scrum | CI/CD | Cloud Deployment | MVC/Layered Architecture | Input Validation | Authentication

PROJECTS

Finance Tracker REST API

2026

[Java 21](#) | [Spring Boot](#) | [PostgreSQL](#) | [Railway](#) | [Maven](#) — Live: [finance-tracker-production-1547.up.railway.app](#)

- Built and deployed a production REST API for personal finance management — budgets, expense tracking, and savings goals — with full CRUD operations and PostgreSQL persistence.
- Designed layered architecture (Controller, Service, Repository) using Spring Data JPA and Hibernate with environment-based database switching between local SQLite and production PostgreSQL.
- Implemented bean validation (@NotBlank, @Positive) and a GlobalExceptionHandler returning structured JSON error responses for 400, 404, 409, and 500 status codes.
- Configured automatic CI/CD deployments via Railway GitHub webhooks; documented all endpoints in a professional README.

CrewShift — Employee Shift Management System

2026

[Django REST Framework](#) | [PostgreSQL](#) | [Vanilla JavaScript](#) | [HTML/CSS](#)

- Full-stack web application for managing employee shifts, time-off requests, and shift assignments with role-based access (employee and manager dashboards).
- Built RESTful API endpoints for authentication, shift management, and user operations; configured PostgreSQL and Django ORM for data persistence.
- Implemented CSRF protection, environment variable configuration, and production deployment guidance across Windows, macOS, and Linux.

Channel-Based Q&A Platform

2025

[Next.js](#) | [Prisma ORM](#) | [PostgreSQL](#) | [TypeScript](#) | [Docker](#) | [Tailwind CSS](#) — [github.com/OlisaKenneth/fullStackWeb](#)

- Full-stack Q&A platform with threaded replies, voting, image uploads, advanced search (5 query types with pagination), and an admin dashboard.
- Used Prisma ORM with PostgreSQL for database management, NextAuth.js for authentication with bcrypt password hashing, and Multer for file uploads.
- Containerized with Docker Compose for one-command setup; seeded database with default admin and channel data.

Personal Portfolio Website

2025

[HTML5](#) | [CSS3](#) | [Vanilla JavaScript](#) | [Netlify](#) — Live: [olisakenneth.netlify.app](#)

- Built a fully custom portfolio from scratch — no frameworks or templates — with responsive mobile-first design, CSS animations, and a custom JavaScript scroll indicator.
- Integrated Formspreet contact form and deployed on Netlify with continuous deployment from GitHub.

EMPLOYMENT HISTORY

IT Solutions & Research Intern

May 2025 – Aug 2025

University of Saskatchewan — Saskatoon, SK

- Provided technical support for 25+ users, diagnosing and resolving application and software issues with a structured ticketing workflow.
- Produced 10+ technical documents — troubleshooting guides and resolution workflows — that measurably reduced repeat support tickets.
- Triaged defects, validated fixes, and supported software reliability through structured testing aligned to SDLC practices.

Event Coordination Volunteer

May 2024 – Present

The Mustard Seed — Saskatoon, SK

- Coordinated events and managed multiple simultaneous service requests in a high-demand environment, consistently meeting resolution targets.
- Drove process improvements that reduced operational response times by 30% through root cause identification and workflow redesign.

EDUCATION

Bachelor of Science, Computer Science

University of Saskatchewan — Saskatoon, SK
